UNCLEMOLE

Patented

Micro -and Medium Bore Tunnelling System for Mixed and Water -Bearing Soil with Cobbles and Boulders

Unclemole lowering down to shaft

JICA demonstration machine in Jakarta!

2000 customers can't be wrong.

SLURRY SHIELD MACHINE FOR VARYING SOIL CONDITION!!

Advantages of using the UNCLEMOLE

1. Shield machine, main jack, slurry circulation system, and slurry separation equipment (DESANDMAN) are systemized.
2. Cone-crucsher head excavates and reduces cobbles and boulders of up to 30% of the machine outside diameter and up to 196 MPa (2000kg/cm) UCS.
3. Shield machine can cope with the wide range of ground conditions, i.e. clay, sand and gravel, sand and gravel with cobbles, and soft rock.
4. The main jack can install an excess of 100m in a single drive.
5. Shield machine is remote - controlled via one-man operation on the ground.
6. TV monitoring and steering control are always carried out on operation board to maintain good levels of accuracy.
7. A single jacking pipe can be jacked exclusively in one stroke using the main jack.
8. DESANDMAN is a compact, flexible slurry separation system which can save installation space.
9. Larger size than below table are available upon request.

Digital operation board is now available upon request.
